0DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 17-19, 21-24, 26, 29, 42-44 drawn to an isolated polypeptide encoded by nucleic acid of SEQ ID NO: 2, classified in class 530, subclass 350 for example.
 - II. Claims 25, 30 and 31 drawn to a recombinant cell, classified in class 435, subclass 325 for example.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01).

The polypeptide of invention I is patently distinct from the recombinant cell of invention III. A polypeptide, which is composed of amino acids is a structurally distinct molecule while the cell is obtained by recombinant processes that utilize DNA. In the instant case, the search of the polypeptides and recombinant cell is not coextensive and searching the inventions of I and II together would impose a serious search burden.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
